

*"40 miles to landfall, morning watch (0630 hours)
26 degrees and zero wind - could be a long day.....
care for a cold glass of water"*

*Spectra's technology is so simple that one touch of
the MPC panel starts the unit in an automatic working
mode. The system will automatically fill your tanks to
the desired level, back flush - cleaning itself and then
wait in anticipation for water levels to change.
Then, the process begins again automatically.*
