WATERMAKERS

# New! Newport Deluxe

## More Water - Less Money!

The Spectra Newport MK II Deluxe series is the latest addition to Spectra's extremely successful Newport MK II line. The new system is built on the Newport MK II MPC frame, making it robust, reliable and economical.

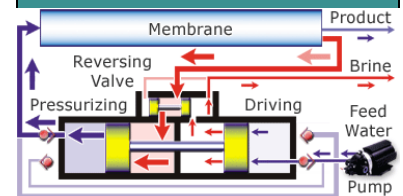

With the same water production capacity and energy efficiency as the well established Newport MK II MPC systems, the Deluxe version is everything that its predecessors are — sophisticated, rugged and reliable but with a simplified control system.

Built for the "hands on" mariner, the Newport Deluxe is a fully operational Newport MKII available in 400, 700, and 1000 gallon per day models. With lots of options including a remote control and gauge panel or fresh water flush module, the Newport MK II Deluxe is fully customizable to meet your watermaking needs!

The **Newport Deluxe systems** are simplicity at its best! Using an extremely reliable stainless steel Spectra Magdrive™ feed pump, coupled to a commercial grade DC motor, brushless DC boost pump, modular construction and the most durable composite components, it is everything you have come to expect from a Spectra Watermaker. With a simplified control circuit, it is the most economical Spectra Newport MK II available!

The **Newport MKII Deluxe series** is designed and engineered for maximum reliability, efficiency, and ease of service. As with our other systems the MKII Deluxe system comes complete with Spectra's proprietary Clark Pump high pressure intensifier which maintains the proper pressures in the membrane throughout a wide range of ocean temperatures and water conditions without any adjustments or loss of product water output. The composite construction is corrosion resistant and the Clark Pump has the best warranty in the business. Spectra is still the most energy efficient marine system available!

The **Newport 400 Deluxe series** is available in 12V and 24V to allow the versatility and safety of low voltage operation while the 700 and 1000 models are available and range of both DC and AC voltages. Spectra Newport are the most quiet and easy to operate watermakers available.

The **Newport Deluxe systems** can be mounted in a variety of configurations to meet the needs of almost any vessel. Designed with easy installation in mind. The system modules are pre-plumbed and pre-wired to save time and installation costs. All Spectra systems come with a complete installation kit adding value and saving time in parts procurement.
